EXPERIENCE

General Motors Software Engineer

Austin, TX
11/2023 – 05/2025

- Designed and developed microservices using Spring Boot and Java with RESTful APIs, integrating Oracle databases and Tidal job scheduling to automate enterprise data pipelines.
- Built and maintained Angular front-end applications (TypeScript, HTML, CSS) within the GIMS platform, delivering component-based UIs for incident capture, draft management, and media attachments.
- Implemented RBAC across front-end and back-end layers, and integrated JIRA/PRTS APIs to automate incident linking and reduce manual overhead.
- Led code reviews and coordinated production deployments with cross-functional teams using Azure DevOps and Git.
- Developed and maintained highly responsive, user-friendly web applications using Angular and advanced JavaScript.
- Developed scalable, secure backend services and RESTful APIs using Spring Boot and Quarkus frameworks.
- Collaborated with cross-functional teams in an Agile environment to plan, design, and roll out new features and improvements.

General Motors Software Test Engineer

Austin, TX
06/2022 – 11/2023

- Developed and verified test scenarios for 5+ internal web applications, writing comprehensive unit and integration tests using JUnit, Mockito, and Selenium to ensure high-quality, reliable code.
- Constructed Power BI reports widely used across the company by integrating with multiple enterprise databases for cross-team visibility and data-driven decision making.
- Managed test case storage, tracking, and documentation in Azure DevOps across multiple concurrent projects.

LITCheck, LLC Software Development Intern

Atlanta, GA
06/2021 – 06/2022

- Collaborated with QA, Legal, Sales, and Engineering teams to support development cycles; participated in code reviews and testing to resolve issues prior to deployment.

PROJECTS

Delaluna Answers — Mobile App (iOS & Android)

Mobile Developer · React Native · Expo SDK 54 · TypeScript · Firebase · RevenueCat

2024 – Present

- Built a production astrology app (natal charts, horoscopes, transit readings, synastry, AI interpretations, chat advisor) as lead and sole developer across the full product lifecycle.
- Engineered a native calculation engine via react-native-swisseph (Swiss Ephemeris) for Placidus house calculations, 12-planet natal charts, and synastry comparison accurate to ~1 arc-second.
- Architected Expo Router navigation across 30+ screens with nested tabs, deep-linked profiles, and dynamic routes; set up EAS Build CI/CD with 5 build profiles and OTA update channels.
- Integrated Firebase GenAI Extensions for AI chart interpretations, RevenueCat for full subscription lifecycle (plans, consumables, free trial, branded paywall), and Expo push notifications with timezone-aware scheduling.
- Designed Firebase RBAC via custom auth claims, a custom OTP email verification flow (Cloud Functions + Firestore), a remote force-update gate, and full observability with Analytics, Crashlytics, and Performance traces.

EDUCATION

M.S. Business Intelligence — Full Sail University, Winter Park, FL

01/2023 – 02/2024

B.S. Mobile Development — Full Sail University, Winter Park, FL

09/2019 – 09/2022

SKILLS & TECHNOLOGIES

Languages: Java, TypeScript, JavaScript, Swift, C#, HTML, CSS

Frameworks: Spring Boot, Angular, React Native, Expo, Quarkus, Java CAF, JUnit

Architecture: Microservices, REST APIs, API Gateway, RBAC, CI/CD (EAS Build, OTA)

Databases: Oracle, MySQL, PostgreSQL, SQL

Cloud & DevOps: Firebase (Firestore, Cloud Functions, Auth, GenAI, Analytics, Crashlytics), RevenueCat, Azure DevOps, Kubernetes, Tidal, Git, Jira

Mobile: iOS (Swift, Xcode), Android (Android Studio), React Native, Expo SDK 54
